FELIX K. CHELIMO FOR: CHIEF EXECUTIVE OFFICER INSURANCE REGULATORY AUTHORITY

SECTION II INSTRUCTIONS TO TENDERERS

2.1 Eligible tenderers

- 2.1.1. This Invitation to tender is open to all tenderers eligible as described in the instructions to tenderers. Successful tenderers shall provide the services for the stipulated duration from the date of commencement (hereinafter referred to as the term) specified in the tender documents.
- 2.1.2. The procuring entity's employees, committee members, board members and their relative (spouse and children) are not eligible to participate in the tender unless where specially allowed under section 131 of the Act.
- 2.1.3. Tenderers shall provide the qualification information statement that the tenderer (including all members, of a joint venture and subcontractors) is not associated, or have been associated in the past, directly or indirectly, with a firm or any of its affiliates which have been engaged by the Procuring entity to provide consulting services for the preparation of the design, specifications, and other documents to be used for the procurement of the services under this Invitation for tenders.
- 2.1.4. Tenderers involved in corrupt or fraudulent practices or debarred from participating in public procurement shall not be eligible.

2.2 Cost of tendering

- 2.2.1 The Tenderer shall bear all costs associated with the preparation and submission of its tender, and the procuring entity, will in no case be responsible or liable for those costs, regardless of the conduct or outcome of the tendering process.
- 2.2.2 The price to be charged for the tender document shall not exceed Kshs.1,000/=
- 2.2.3 The procuring entity shall allow the tenderer to review the tender document free of charge before purchase.

2.3 Contents of tender documents

- 2.3.1. The tender document comprises of the documents listed below and addenda issued in accordance with clause 6 of these instructions to tenders
 - i) Instructions to tenderers
 - ii) General Conditions of Contract
 - iii) Special Conditions of Contract
 - iv) Schedule of Requirements
 - v) Details of service
 - vi) Form of tender

- vii) Price schedules
- viii) Contract form
- ix) Confidential business questionnaire form
- x) Self-Declaration Form
- xi) Tender security form
- xii) Performance security form
- xiii) Principal's or Manufacturers Authorization form
- xiv) Declaration form
- 2.3.2. The Tenderer is expected to examine all instructions, forms, terms, and specifications in the tender documents. Failure to furnish all information required by the tender documents or to submit a tender not substantially responsive to the tender documents in every respect will be at the tenderers risk and may result in the rejection of its tender.

2.4 Clarification of Documents

- 2.4.1. A prospective candidate making inquiries of the tender document may notify the Procuring entity in writing or by post, fax or email at the entity's address indicated in the Invitation for tenders. The Procuring entity will respond in writing to any request for clarification of the tender documents, which it receives no later than seven (7) days prior to the deadline for the submission of tenders, prescribed by the procuring entity. Written copies of the Procuring entities response (including an explanation of the query but without identifying the source of inquiry) will be sent to all prospective tenderers who have received the tender documents.
- 2.4.2. The procuring entity shall reply to any clarifications sought by the tenderer within 3 days of receiving the request to enable the tenderer to make timely submission of its tender.

2.5 Amendment of documents

- 2.5.1. At any time prior to the deadline for submission of tenders, the Procuring entity, for any reason, whether at its own initiative or in response to a clarification requested by a prospective tenderer, may modify the tender documents by issuing an addendum.
- 2.5.2. All prospective tenderers who have obtained the tender documents will be notified of the amendment by post, fax or email and such amendment will be binding on them.
- 2.5.3. In order to allow prospective tenderers reasonable time in which to take the amendment into account in preparing their tenders, the Procuring entity, at its discretion, may extend the deadline for the submission of tenders.

2.6 Language of tender

2.6.1. The tender prepared by the tenderer, as well as all correspondence and documents relating to the tender exchanged by the tenderer and the Procuring entity, shall be written in English language. Any printed literature furnished by the tenderer may be written in another language provided they are accompanied by an accurate English translation of the relevant passages in which case, for purposes of interpretation of the tender, the English translation shall govern.

2.7 **Documents Comprising the Tender**

The tender prepared by the tenderer shall comprise the following components:

- (a) A Tender Form and a Price Schedule completed in accordance with paragraph 9, 10 and 11 below
- (b) Documentary evidence established in accordance with Clause 2.11 that the tenderer is eligible to tender and is qualified to perform the contract if its tender is accepted;
- (c) Tender security furnished is in accordance with Clause 2.12
- (d) Confidential business questionnaire

2.8 Form of Tender

2.9.1 The tenderers shall complete the Form of Tender and the appropriate Price Schedule furnished in the tender documents, indicating the services to be performed.

2.9 Tender Prices

- 2.9.1 The tenderer shall indicate on the Price schedule the unit prices where applicable and total tender prices of the services it proposes to provide under the contract.
- 2.9.2 Prices indicated on the Price Schedule shall be the cost of the services quoted including all customs duties and VAT and other taxes payable:
- 2.9.3 Prices quoted by the tenderer shall remain fixed during the term of the contract unless otherwise agreed by the parties. A tender submitted with an adjustable price quotation will be treated as non-responsive and will be rejected, pursuant to paragraph 2.22.
- 2.9.4 Contract price variations shall not be allowed for contracts not exceeding one year (12 months).
- 2.9.5 Where contract price variation is allowed, the variation shall not exceed 10% of the original contract price.

2.9.6 Price variation requests shall be processed by the procuring entity within 30 days of receiving the request.

2.10 Tender Currencies

2.10.1 Prices shall be quoted in Kenya Shillings unless otherwise specified in the appendix to in Instructions to Tenderers.

2.11 Tenderers Eligibility and Qualifications.

- 2.11.1 Pursuant to Clause 2.1 the tenderer shall furnish, as part of its tender, documents establishing the tenderers eligibility to tender and its qualifications to perform the contract if its tender is accepted.
- 2.11.2 The documentary evidence of the tenderers qualifications to perform the contract if its tender is accepted shall establish to the Procuring entity's satisfaction that the tenderer has the financial and technical capability necessary to perform the contract.

2.12 Tender Security

- 2.12.1 The tenderer shall furnish, as part of its tender, a tender security for the amount and form specified in the Invitation to tender.
- 2.12.2 The tender security shall be in the amount not exceeding 2 per cent of the tender price.
- 2.12.2 The tender security is required to protect the Procuring entity against the risk of Tenderer's conduct which would warrant the security's forfeiture, pursuant to paragraph 2.12.7
- 2.12.3 The tender security shall be denominated in a Kenya Shillings or in another freely convertible currency and shall be in the form of:
 - a) A bank guarantee
 - b) Cash.
 - c) Such insurance guarantee approved by the Authority.
 - d) Letter of credit
- 2.12.4 Any tender not secured in accordance with paragraph 2.12.1 and 2.12.3 will be rejected by the Procuring entity as non responsive, pursuant to paragraph 2.20
- 2.12.5 Unsuccessful tenderer's security will be discharged or returned as promptly as possible as but not later than thirty (30) days after the

expiration of the period of tender validity prescribed by the procuring entity.

- 2.12.6 The successful tenderer's tender security will be discharged upon the tenderer signing the contract, pursuant to paragraph 2.29, and furnishing the performance security, pursuant to paragraph 2.30.
- 2.12.7 The tender security may be forfeited:

(a) If a tenderer **withdraws** its tender **during** the period of tender validity specified by the procuring entity on the Tender Form; or

(b) In the case of a successful tenderer, *if* the tenderer fails:

(i) to sign the contract in accordance with paragraph 30 **or** (ii) to furnish performance security in accordance with paragraph 31.

(c) If the tenderer rejects, correction of an error in the tender.

2.13 Validity of Tenders

- 2.13.1 Tenders shall remain valid for 90 days or as specified in the invitation to tender after date of tender opening prescribed by the Procuring entity, pursuant to paragraph 2.18. A tender valid for a shorter period shall be rejected by the Procuring entity as non-responsive.
- 2.13.2In exceptional circumstances, the Procuring entity may solicit the Tenderer's consent to an extension of the period of validity. The request and the responses thereto shall be made in writing. The tender security provided under paragraph 2.12 shall also be suitably extended. A tenderer may refuse the request without forfeiting its tender security. A tenderer granting the request will not be required nor permitted to modify its tender.

2.14 Format and Signing of Tender

- 2.14.1The tenderer shall prepare two copies of the tender, clearly marking each "**ORIGINAL TENDER**" and "**COPY OF TENDER**," as appropriate. In the event of any discrepancy between them, the original shall govern.
- 2.14.2The original and all copies of the tender shall be typed or written in indelible ink and shall be signed by the tenderer or a person or persons duly authorized to bind the tenderer to the contract. All pages of the tender, except for unamended printed literature, shall be initialed by the person or persons signing the tender.

2.14.3The tender shall have no interlineations, erasures, or overwriting except as necessary to correct errors made by the tenderer, in which case such corrections shall be initiated by the person or persons signing the tender.

2.15 Sealing and Marking of Tenders

2.15.1 The tenderer shall seal the original and each copy of the tender in separate envelopes, duly marking the envelopes as **"ORIGINAL"** and **"COPY."** The envelopes shall then be sealed in an outer envelope. The inner and outer envelopes shall:

(a) be addressed to the Procuring entity at the address given in the invitation to tender

(b) bear, tender number and name in the invitation to tender and the words: **"DO NOT OPEN BEFORE 12th March, 2021** at **2:00 p.m."**

- 2.15.3 The inner envelopes shall also indicate the name and address of the tenderer to enable the tender to be returned unopened in case it is declared "late".
- 2.15.4 If the outer envelope is not sealed and marked as required by paragraph 2.15.2, the Procuring entity will assume no responsibility for the tender's misplacement or premature opening.

2.16 Deadline for Submission of Tenders

- 2.16.1 Tenders must be received by the Procuring entity at the address specified under paragraph 2.15.2 no later 12th March, 2021 at 2:00 p.m.
- 2.16.2 The procuring entity may, at its discretion, extend this deadline for the submission of tenders by amending the tender documents in accordance with paragraph 6, in which case all rights and obligations of the procuring entity and candidates previously subject to the deadline will thereafter be subject to the deadline as extended.
- 2.16.3 Bulky tenders which will not fit in the tender box shall be received by the procuring entity as provided for in the appendix.

2.17 Modification and withdrawal of tenders

2.17.1 The tenderer may modify or withdraw its tender after the tender's submission, provided that written notice of the modification, including substitution or withdrawal of the tender's is received by the procuring entity prior to the deadline prescribed for the submission of tenders.

- 2.17.2 The Tenderer's modification or withdrawal notice shall be prepared, sealed, marked, and dispatched in accordance with the provisions of paragraph 2.15. A withdrawal notice may also be sent by cable, but followed by a signed confirmation copy, postmarked not later than the deadline for submission of tenders.
- 2.17.3 No tender may be modified after the deadline for submission of tenders.
- 2.17.4 No tender may be withdrawn in the interval between the deadline for submission of tenders and the expiration of the period of tender validity specified by the tenderer on the Tender Form. Withdrawal of a tender during this interval may result in the Tenderer's forfeiture of its tender security, pursuant to paragraph 2.12.7.
- 2.17.5 The procuring entity may at any time terminate procurement proceedings before contract award and shall not be liable to any person for the termination.
- 2.17.6 The procuring entity shall give prompt notice of the termination to the tenderers and on request give its reasons for termination within 14 days of receiving the request from any tenderer.

2.18 Opening of Tenders

- 2.18.1 The Procuring entity will open all tenders in the presence of tenderers' representatives who choose to attend, on **12th March, 2021 at 2:00 p.m.** and in the location specified in the invitation to tender. The tenderers' representatives who are present shall sign a register evidencing their attendance.
- 2.18.3 The tenderers' names, tender modifications or withdrawals, tender prices, discounts, and the presence or absence of requisite tender security and such other details as the Procuring Entity, at its discretion, may consider appropriate, will be announced at the opening.
- 2.18.4 The procuring entity will prepare minutes of the tender opening which will be submitted to the tenderers that signed the tender opening register and will have made the request.

2.19 Clarification of tenders

2.19.1 To assist in the examination, evaluation and comparison of tenders the procuring entity may at its discretion, ask the tenderer for a clarification of its tender. The request for clarification and the response shall be in writing, and no change in the prices or substance shall be sought, offered, or permitted.

2.19.2 Any effort by the tenderer to influence the procuring entity in the procuring entity's tender evaluation, tender comparison or contract award decisions may result in the rejection of the tenderers tender.

Comparison or contract award decisions may result in the rejection of the tenderers' tender.

2.20 Preliminary Examination and Responsiveness

- 2.20.1 The Procuring entity will examine the tenders to determine whether they are complete, whether any computational errors have been made, whether required securities have been furnished whether the documents have been properly signed, and whether the tenders are generally in order.
- 2.20.2 Arithmetical errors will be rectified on the following basis. If there is a discrepancy between the unit price and the total price that is obtained by multiplying the unit price and quantity, the unit price shall prevail, and the total price shall be corrected. If the candidate does not accept the correction of the errors, its tender will be rejected, and its tender security may be forfeited. If there is a discrepancy between words and figures, the amount in words will prevail.
- 2.20.3 The Procuring entity may waive any minor informality or non-conformity or irregularity in a tender which does not constitute a material deviation, provided such waiver does not prejudice or affect the relative ranking of any tenderer.
- 2.20.4 Prior to the detailed evaluation, pursuant to paragraph 23, the Procuring entity will determine the substantial responsiveness of each tender to the tender documents. For purposes of these paragraphs, a substantially responsive tender is one which conforms to all the terms and conditions of the tender documents without material deviations. The Procuring entity's determination of a tender's responsiveness is to be based on the contents of the tender itself without recourse to extrinsic evidence.
- 2.20.5 If a tender is not substantially responsive, it will be rejected by the Procuring entity and may not subsequently be made responsive by the tenderer by correction of the nonconformity.

2.21 Conversion to a single currency

2.21.1 Where other currencies are used, the procuring entity will convert those currencies to Kenya shillings using the selling exchange rate on the date of tender closing provided by the central bank of Kenya.

2.22 Evaluation and comparison of tenders.

- 2.22.1 The procuring entity will evaluate and compare the tenders which have been determined to be substantially responsive, pursuant to paragraph 2.20.
- 2.22.2 The comparison shall be of the price including all costs as well as duties and taxes payable on all the materials to be used in the provision of the services.
- 2.22.3 The Procuring entity's evaluation of a tender will take into account, in addition to the tender price, the following factors, in the manner and to the extent indicated in paragraph 2.22.4 and in the technical specifications:
 - (a) Operational plan proposed in the tender;

(b) Deviations in payment schedule from that specified in the Special Conditions of Contract;

2.22.4 Pursuant to paragraph 22.3 the following evaluation methods will be applied:

(a) **Operational Plan**

The Procuring entity requires that the services under the Invitation for Tenders shall be performed at the time specified in the Schedule of Requirements. Tenders offering to perform longer than the procuring entity's required delivery time will be treated as non-responsive and rejected.

(b) Deviation in payment schedule

Tenderers shall state their tender price for the payment on a schedule outlined in the special conditions of contract. Tenders will be evaluated on the basis of this base price. Tenderers are, however, permitted to state an alternative payment schedule and indicate the reduction in tender price they wish to offer for such alternative payment schedule. The Procuring entity may consider the alternative payment schedule offered by the selected tenderer.

2.22.5 The tender evaluation committee shall evaluate the tender within 30 days from the date of opening the tender.

- 2.22.6 To qualify for contract awards, the tenderer shall have the following: -
 - (a) Necessary qualifications, capability experience, services, equipment and facilities to provide what is being procured.
 - (b) Legal capacity to enter into a contract for procurement
 - (c) Shall not be insolvent, in receivership, bankrupt or in the process of being wound up and is not the subject of legal proceedings relating to the foregoing
 - (d) Shall not be debarred from participating in public procurement.

2.23 Contacting the procuring entity

- 2.23.1 Subject to paragraph 2.19, no tenderer shall contact the procuring entity on any matter relating to its tender, from the time of the tender opening to the time the contract is awarded.
- 2.23.2 Any effort by a tenderer to influence the procuring entity in its decisions on tender evaluation tender comparison or contract award may result in the rejection of the tenderers tender.

2.24 Award of Contract

a) **Post qualification**

- 2.24.1 In the absence of pre-qualification, the Procuring entity will determine to its satisfaction whether the tenderer that is selected as having submitted the lowest evaluated responsive tender is qualified to perform the contract satisfactorily.
- 2.24.2 The determination will take into account the tenderer's financial and technical capabilities. It will be based upon an examination of the documentary evidence of the tenderer's qualifications submitted by the tenderer, pursuant to paragraph 2.1.2, as well as such other information as the Procuring entity deems necessary and appropriate.
- 2.24.3 An affirmative determination will be a prerequisite for award of the contract to the tenderer. A negative determination will result in rejection of the Tenderer's tender, in which event the Procuring entity will proceed to the next lowest evaluated tender to make a similar determination of that Tenderer's capabilities to perform satisfactorily.

b) Award Criteria

- 2.24.4 Subject to paragraph 2.29 the Procuring entity will award the contract to the successful tenderer whose tender has been determined to be substantially responsive and has been determined to be the lowest evaluated tender, provided further that the tenderer is determined to be qualified to perform the contract satisfactorily.
- 2.24.5 The procuring entity reserves the right to accept or reject any tender and to annul the tendering process and reject all tenders at any time prior to contract award, without thereby incurring any liability to the affected tenderer or tenderers or any obligation to inform the affected tenderer or tenderers of the grounds for the procuring entity's action. If the procuring entity determines that none of the tenderers is responsive; the procuring entity shall notify each tenderer who submitted a tender.
- 2.24.6 A tenderer who gives false information in the tender document about its qualification or who refuses to enter into a contract after notification of contract award shall be considered for debarment from participating in future public procurement.

2.25 Notification of award

- 2.25.1 Prior to the expiration of the period of tender validity, the Procuring entity will notify the successful tenderer in writing that its tender has been accepted.
- 2.25.2 The notification of award will signify the formation of the Contract subject to the signing of the contract between the tenderer and the procuring entity pursuant to clause 2.29. Simultaneously the other tenderers shall be notified that their tenders have not been successful.
- 2.25.3 Upon the successful Tenderer's furnishing of the performance security pursuant to paragraph 31, the Procuring entity will promptly notify each unsuccessful Tenderer and will discharge its tender security, pursuant to paragraph 2.12.

2.26 Signing of Contract

- 2.26.1 At the same time as the Procuring entity notifies the successful tenderer that its tender has been accepted, the Procuring entity will simultaneously inform the other tenderers that their tenders have not been successful.
- 2.26.2 Within fourteen (14) days of receipt of the Contract Form, the successful tenderer shall sign and date the contract and return it to the Procuring entity.

2.26.3 The parties to the contract shall have it signed within 30 days from the date of notification of contract award unless there is an administrative review request.

2.27 Performance Security

- 2.27.1 Within thirty (30) days of the receipt of notification of award from the Procuring entity, the successful tenderer shall furnish the performance security in accordance with the Conditions of Contract, in the Performance Security Form provided in the tender documents, or in another form acceptable to the Procuring entity.
- 2.27.2 Failure of the successful tenderer to comply with the requirement of paragraph 2.29 or paragraph 2.30.1 shall constitute sufficient grounds for the annulment of the award and forfeiture of the tender security, in which event the Procuring entity may make the award to the next lowest evaluated or call for new tenders.

2.28 Corrupt or Fraudulent Practices

- 2.28.1 The Procuring entity requires that tenderers observe the highest standard of ethics during the procurement process and execution of contracts. A tenderer shall sign a declaration that he has not and will not be involved in corrupt or fraudulent practices.
- 2.28.2 The procuring entity will reject a proposal for award if it determines that the tenderer recommended for award has engaged in corrupt or fraudulent practices in competing for the contract in question;
- 2.28.3 Further, a tenderer who is found to have indulged in corrupt or fraudulent practices risks being debarred from participating in public procurement in Kenya.

Appendix to instructions to tenderers

The following information for procurement of services shall complement or amend the provisions of the instructions to tenderers. Wherever there is a conflict between the provisions of the instructions to tenderers and the provisions of the appendix, the provisions of the appendix herein shall prevail over those of the instructions to tenderers.

SECTION III: GENERAL CONDITIONS OF CONTRACT

3.1 Definitions

In this contract the following terms shall be interpreted as indicated:

- a) "The contract" means the agreement entered into between the Procuring entity and the tenderer as recorded in the Contract Form signed by the parties, including all attachments and appendices thereto and all documents incorporated by reference therein.
- b) "The Contract Price" means the price payable to the tenderer under the Contract for the full and proper performance of its contractual obligations.
- c) "The services" means services to be provided by the contractor including materials and incidentals which the tenderer is required to provide to the Procuring entity under the Contract.
- d) "The Procuring entity" means the organization sourcing for the services under this Contract.
- e) "The contractor means the individual or firm providing the services under this Contract.
- f) "GCC" means general conditions of contract contained in this section
- g) "SCC" means the special conditions of contract
- h) "Day" means calendar day

3.2 Application

These General Conditions shall apply to the extent that they are not superceded by provisions of other part of contract.

3.3 Standards

3.3.1 The services provided under this Contract shall conform to the 7 standards mentioned in the Schedule of requirements

3.4 Patent Right's

The tenderer shall indemnify the Procuring entity against all third-party claims of infringement of patent, trademark, or industrial design tights arising from use of the services under the contract or any part thereof.

3.5 Performance Security

3.5.1 Within twenty-eight (28) days of receipt of the notification of Contract award, the successful tenderer shall furnish to the Procuring entity the

performance security where applicable in the amount specified in Special Conditions of Contract.

- 3.5.2 The proceeds of the performance security shall be payable to the Procuring entity as compensation for any loss resulting from the Tenderer's failure to complete its obligations under the Contract.
- 3.5.3 The performance security shall be denominated in the currency of the Contract or in a freely convertible currency acceptable to the Procuring entity and shall be in the form of:
 - a) Cash.
 - b) A bank guarantee.
 - c) Such insurance guarantee approved by the Authority.
 - d) Letter of credit.
- 3.5.4 The performance security will be discharged by the procuring entity and returned to the candidate not later than thirty (30) days following the date of completion of the tenderer's performance of obligations under the contract, including any warranty obligations under the contract.

3.6 Inspections and Tests

- 3.6.1 The Procuring entity or its representative shall have the right to inspect and/or to test the services to confirm their conformity to the Contract specifications. The Procuring entity shall notify the tenderer in writing, in a timely manner, of the identity of any representatives retained for these purposes.
- 3.6.2 The inspections and tests may be conducted on the premises of the tenderer or its subcontractor(s). If conducted on the premises of the tenderer or its subcontractor(s), all reasonable facilities and assistance, including access to drawings and production data, shall be furnished to the inspectors at no charge to the Procuring entity.
- 3.6.3 Should any inspected or tested services fail to conform to the Specifications, the Procuring entity may reject the services, and the tenderer shall either replace the rejected services or make alterations necessary to meet specification requirements free of cost to the Procuring entity.
- 3.6.4 Nothing in paragraph 3.7 shall in any way release the tenderer from any warranty or other obligations under this Contract.

3.7 Payment

3.7.1 The method and conditions of payment to be made to the tenderer under **this Contract shall be specified in SCC.**

3.8 Prices

Prices charged by the contractor for services performed under the Contract shall not, with the exception of any Price adjustments authorized in SCC, vary from the prices by the tenderer in its tender or in the procuring entity's request for tender validity extension as the case may be. No variation in or modification to the terms of the contract shall be made except by written amendment signed by the parties.

3.9 Assignment

The tenderer shall not assign, in whole or in part, its obligations to perform under this contract, except with the procuring entity's prior written consent.

3.10 Termination for Default

The Procuring entity may, without prejudice to any other remedy for breach of Contract, by written notice of default sent to the tenderer, terminate this Contract in whole or in part:

- a) if the tenderer fails to provide any or all of the services within the period(s) specified in the Contract, or within any extension thereof granted by the Procuring entity.
- b) if the tenderer fails to perform any other obligation(s) under the Contract.
- c) if the tenderer, in the judgment of the Procuring entity has engaged in corrupt or fraudulent practices in competing for or in executing the Contract.

In the event the Procuring entity terminates the Contract in whole or in part, it may procure, upon such terms and in such manner as it deems appropriate, services similar to those undelivered, and the tenderer shall be liable to the Procuring entity for any excess costs for such similar services.

3.11 Termination of insolvency

The procuring entity may at the anytime terminate the contract by giving written notice to the contractor if the contractor becomes bankrupt or otherwise insolvent. In this event, termination will be without compensation to the contractor, provided that such termination will not produce or affect any right of action or remedy, which has accrued or will accrue thereafter to the procuring entity.

3.12 Termination for convenience

- 3.12.1 The procuring entity by written notice sent to the contractor may terminate the contract in whole or in part, at any time for its convenience. The notice of termination shall specify that the termination is for the procuring entity convenience, the extent to which performance of the contractor of the contract is terminated and the date on which such termination becomes effective.
- 3.12.2 For the remaining part of the contract after termination the procuring entity may elect to cancel the services and pay to the contractor on agreed amount for partially completed services.

3.13 Resolution of disputes

The procuring entity's and the contractor shall make every effort to resolve amicably by direct informal negotiations any disagreement or dispute arising between them under or in connection with the contract.

If after thirty (30) days from the commencement of such informal negotiations both parties have been unable to resolve amicably a contract dispute either party may require that the dispute be referred for resolution to the formal mechanisms specified in the SCC.

3.14 Governing Language

The contract shall be written in the English language. All correspondence and other documents pertaining to the contract, which are exchanged by the parties, shall be written in the same language.

3.15 Force Majeure

The contractor shall not be liable for forfeiture of its performance security, or termination for default if and to the extent that its delay in performance or other failure to perform its obligations under the Contract is the result of an event of Force Majeure.

3.16 Applicable Law.

The contract shall be interpreted in accordance with the laws of Kenya unless otherwise specified in the SCC

3.17 Notices

Any notices given by one party to the other pursuant to this contract shall be sent to the other party by post or by fax or E-mail and confirmed in writing to the other party's address specified in the SCC A notice shall be effective when delivered or on the notices effective date, whichever is later.

SECTION IV: SPECIAL CONDITIONS OF CONTRACT

- 4.1 Special conditions of contract shall supplement the general conditions of contract, wherever there is a conflict between the GCC and the SCC, the provisions of the SCC herein shall prevail over those in the GCC.
- 4.2 Special conditions of contract with reference to the general conditions of contract.

SECTION V – TECHNICAL SPECIFICATIONS

5.1 General

- 5.1.1 These specifications describe the requirements for goods. Tenderers are requested to submit with their offers the detailed specifications, drawings, catalogues, brochures, etc for the products they intend to supply where applicable.
- 5.1.2 Tenderers must indicate on the specifications sheets whether the equipment offered comply with each specified requirement.
- 5.1.3 All the dimensions and capacities of the equipment to be supplied shall not be less than those required in these specifications. Deviations from the basic requirements, if any shall be explained in detail in writing with the offer, with supporting data such as calculation sheets, etc. The procuring entity reserves the right to reject the products, if such deviations shall be found critical to the use and operation of the products.
- 5.1.4 The tenderers are requested to present information along with their offers as follows:
 - (i) Shortest possible delivery period of each product
 - (ii) Information on proper representative and/or workshop for back-up service/repair and maintenance including their names and addresses.
 - (iii) Bidder must mention the country of origin for the goods.

5.2 TECHNICAL SPECIFICATIONS FOR SUPPLY, INSTALLATION & TESTING OF CORE SWITCH AND ASSOCIATED ACCESSORIES

INTRODUCTION

The Insurance Regulatory Authority (IRA) is a State Corporation established under the Insurance Act, Cap 487 of the Laws of Kenya with the mandate to regulate, supervise and promote development of the insurance industry in Kenya.

IRA over the past few years has made strides in deploying ICT solution that acts as a tool of dispensing its legislative services to the users. In this quest to harness technology, the IRA needs to Upgrade Network (Wired and Wireless). The components proposed to be supplied by the Contractor shall be branded industry proven products. All supplies shall conform to the requirements of relevant.

Kenyan and International standards. The Contractor shall provide all the required components and services to fulfill the intent of the specification and to ensure the completeness, operation and maintainability of the system at no extra cost to the procuring entity.

SCOPE OF WORK

The scope of this tender comprises the detailed network Designing, Supply, Installation, Testing and Commissioning of Network equipment which include Redundant Core Switch and the Associated Accessories within IRA Offices as described in this documentation. IRA shall strive to achieve this noble objective by deploying sustainable, reliable and affordable technologies in the market.

The contractor shall be expected to: -

- 1. be responsible for ensuring that LAN installation devices are fully compatible with the IRA provided specifications; the Contractor shall include the required/necessary modifications and rectifications to the systems during the system implementation phase. Any of such modifications and rectifications must be done in writing to the ICT manager for approval before they are implemented.
- 2. ensure that all Wired and Wireless Access Points (WAP) are configured to access internet and other Network Resources from Print /internet Servers and can broadcast the signal. This shall be done to ensure that all Access Points (APs) and extenders have the required configuration to transmit the internet services amongst other Network services.

- 3. have the Access points configured in different channels to avoid signal overlap within the same broadcast length.
- 4. note the project time schedule and ensure that the project is fully implemented and operational for the hand-over of the Project within the seven (7) weeks from award of the contract. In addition, the Contractor shall provide all necessary additional resources and solutions to mitigate any risks associated with the project.
- 5. Provide a 3-month Defects Liability Period (DLP) after practical completion date/commissioning date. The Contractor shall provide system performance warranty for the installed system from the manufacturers of the components/equipment.
- 6. Provide Service Level Agreements (SLAs) to ensure maintenance and resolving of issue with the Network Services.

In summary the Contractor is expected to: -

- i) Supply Networking equipment and other accessories listed in the BOQ and technical support.
- ii) Comprehensively label all installed devices/components which shall be contained in the network documentation.
- iii) Provide any necessary accessories to ensure that both wired and wireless reception is wholesomely achieved in the IRA offices. Testing of the reception will have to be done prior to completion and sign off of the project.
- iv) Ensure that the wireless access points must be configured with two SSIDs. One for IRA Staff and the second SSIDs for the guest access. The guest SSID platform shall not be broadcasted and shall only allow guests to have internet access with no access whatsoever to the IRA core network.

Tenderers are required to ensure compliance with the specifications in the format provided in the table below for the core switch and associated accessories: -

TECHNICAL SPECIFICATION

	Description	Complied (C) /Not Complied (NC)/Partially Complied (PC)	If complied Bidder's MUST provide explanation of compliance with reference to datasheet or bill of materials with the specific page number and section of the reference
(a)	Core Switch		
1.	Proposed switch must have high wire-rate performance for switching and routing at 40 G, 10 G and gigabit speeds. Advanced services are incorporated in the operating system: QoS, access control lists (ACLs), L2/L3, VLAN stacking and IPv6		
	Proposed switch must have Redundant hardware system architecture. Internal, hot- swappable power supplies, fans. Front-to- back and back-to-front cooling models		
2.	Switch must have Power consumption per 10 GbE port in its class		
3.	Proposed switch must have scalable network virtualization architecture for guaranteed SLA delivery over standard Ethernet fabric: Edge Virtual Bridging (EVB), Shortest Path Bridging (SPB) and dynamic Virtual Network Profiles (vNP)		
	Proposed switch must have DCB support: Lossless Ethernet for all traffic		
	Switches shall propose a linux-like CLI (cd, pwd, cp, mv, rm, vi, ls).		
	Max switching capacity 600 - 640 Gb/s and Throughput 400 - 480 Mbp/s		
	Power consumption 150 - 200 Watts and Heat dissipation Heat dissipation		
	Switch shall be fully SNMP (v1, v2 & v3) manageable and every configuration item should be configurable through SNMP.		
	Switch shall support the following remote access methods: FTP, SCP, SSH(v2)/SFTP, Telnet, TFTP.		
10	Switch shall support Multiple software images and configurations with fallback recovery. A reboot of any switch may be initiated with a		
	time-out programmable rollback, allowing		20

	[]
automatic fallback to a safe configuration	
and/or software image.	
11.Switch shall support disaster recovery and	
upload/download image files through USB	
device.	
12. Switch shall support RMon Base, sFlow Base,	
Switch Logging and Syslog.	
13.Switch shall support Unidirectional Link	
Detection (UDLD) and Digital Diagnostic	
Monitoring (DDM), allowing real-time	
diagnostics of fiber connections for early	
detection of optical signal deterioration.	
14.Switch shall support 802.1AB Link Layer	
Discovery Protocol (LLDP) with MED	
extensions for automated device discovery.	
15.Switch shall support Multiple VLAN	
Registration Protocol (MVRP) for IEEE	
802.1Q-compliant virtual LAN (VLAN) pruning	
and dynamic VLAN creation.	
16.Core switch shall support an auto-QoS	
feature for switch management traffic and	
traffic from IP phones.	
17.Core switch shall support remote auto-	
configuration download easing and	
automating provisioning of edge switches.	
Routing and Multicast	
1. Switch shall support a switch capacity of 160	
Gb/s on the 24 Port and 200 Gb/S on the 48	
port and 240 Gb/S on the 10 port	
2. Switch shall support a switch frame rate of	
120 Mpps on the 24 Port and 160 Mpps on	
the 48 port and 200 Mpps on the 10 port	
3. Every switch shall support at least static	
routing and RIP (v1 & v2 for IPv4, next	
generation for IPv6).	
4. Every switch shall support at least 256 IPv4	
and 128 IPv6 routes	
5. Every switch shall support at least 128 IPv4	
and 16 IPv6 router interfaces	
6. Every switch shall support IGMPv1/v2/v3	
snooping for optimized multicast traffic.	
7. Every switch shall support Multicast Listener	
Discovery (MLD) v1/v2 snooping.	
8. Every switch shall support at least 1000	
multicast groups	
9. Every switch shall support Multicast VLAN	
(IPMVLAN)	
Switch Resiliency and high availability	
1. Every switch shall support 802.1d STP	
1. Divery Switch Shan Support 002.10 SH	
	33

Snowning Tree Drotocol	
Spanning Tree Protocol.	
2. Every switch shall support 802.1w Rapid	
Spanning Tree Protocol.	
3. Every switch shall support 802.1s Multiple	
Spanning Tree Protocol.	
4. Every switch shall support Per-VLAN	
spanning tree (PVST+)	
5. Every access switch shall support Dual Home	
Link (DHL) for link protection without	
Spanning Tree protocol.	
6. Every switch shall support Link Aggregation –	
Static and LACP (802.3ad).	
7. Every switch shall support broadcast and	
multicast storm control to avoid degradation	
in overall system performance.	
8. Every switch shall support TU-T	
G.8032/Y.1344 2010: Ethernet Ring	
Protection (ERPv2)	
9. Every switch shall support LLDP (802.1ab)	
10. Every switch shall support Virtual Chassis In-	
Service Software Upgrade (ISSU)	
11.Every switch shall support Virtual Chassis	
1+N redundant supervisor manager	
Switch Security	
1. Every switch shall support Auto-sensing IEEE	
802.1X multi-client, multi-VLAN MAC-based	
authentication for non-802.1X hosts.	
2. Every access switch shall support an	
embedded NAC framework for comprehensive	
user-policy-based network access control.	
3. Every access switch shall support centralized	
RADIUS for device authentication and	
network access control authorization.	
4. Every access switch shall support Web-based	
authentication (Captive Portal): A	
customizable web portal residing on the	
switch that can be used for authenticating	
supplicants as well as non-supplicants.	
5. Every switch shall support Centralized	
RADIUS and LDAP administrator	
authentication.	
6. Every access switch shall support dynamic	
change of authentication (CoA) and enforcing	
traffic remediation or restriction for non-	
compliant devices.	
7. Every access switch shall support automated	
assignment of QoS and Security based on	
MAC address (range) or IP address (range),	
preferably using the concept of configurable	
Network Profiles holding QoS and Security	
parameters, and which are dynamically	24

assigned.	
8. Every access switch shall support MAC	
address lockdown.	
9. Every switch shall support ARP Defense Optimization.	
10.Every switch shall support ARP Poisoning	
Detect.	
11. Every switch shall support IP DoS Filtering.	
12. Every switch shall support user-oriented	
features such as learned port security (LPS),	
port mapping, Dynamic Host Configuration	
Protocol (DHCP) binding tables and User	
Network Profile (UNP) 13.Every switch shall support MACSec	
encryption to secure the network edge:	
1G/2.5G user and 10G up-link ports	
14.Switch shall support the deployment of	
comprehensive and secure BYoD services in	
enterprise networks such as guest	
management, device on-boarding, device posturing, application management and	
dynamic change of authentication (CoA).	
dynamic change of admentication (Con).

Link Layer Discover Protocol (LLDP) with	13.Every switch shall support Dynamic Host Configuration Protocol (DHCP) relay for IPv4/IPv6	
Link Layer Discover Protocol (LLDP) with		
Media Endpoint Discover (MED) extensions		

15.Every switch shall support NTP	
16. Every TOR switch shall support Access to the	
console via USB Adapter with Bluetooth	
technology to provide wireless management,	
eliminating the use of console cables	
17. Every switch shall support ARP poisoning	
detection	
18. Every switch shall support IP v4 & v6 Source	
Filtering as a protective and effective	
mechanism against ARP attacks	
19. Every switch shall support Bring Your Own	
Device (BYOD) provides on-boarding of Guest,	
IT/non-IT issued and silent devices.	
Restriction/Remediation of traffic from non-	
compliant devices.	
20.Uses RADIUS CoA to dynamically enforce	
User Network Profiles based on	
Authentication, Profiling, Posture check of	
devices.	
21. Every switch shall support Role-based	
authentication for routed domains	
Quality of Services	
1. Every switch shall support Priority queues:	
Eight hardware-based queues per port	
2. Every switch shall support Traffic	
prioritization: Flow-based QoS	
3. Every switch shall support Flow-based traffic	
policing and bandwidth management	
4. Every switch shall support 32-bit IPv4/128-	
bit IPv6 non-contiguous mask classification	
5. Every switch shall support Egress traffic	
shaping	
6. Every switch shall support Lossless Virtual	
Output Queuing (VOQ) with configurable	
scheduling algorithms	
7. Every switch shall support DiffServ	
architecture	
8. Every switch shall support Congestion	
avoidance: Support for end- to-end head-of-	
line (E2EHOL) blocking prevention, IEEE	
802.1Qbb Priority-based Flow Control (PFC)	
and IEEE 802.3x Flow Control (FC)	
(b) Access Switch	
Access Switch Management	
1. All the switches shall use the same Network	
Operating System, with matching CLI	
commands and an embedded Web-based GUI	
that shall allow configuration of every	
configuration item.	

	<u> </u>
2. Switches shall propose a linux-like CLI (cd,	
pwd, cp, mv, rm, vi, ls).	
3. Every switch shall support the following	
remote access methods: FTP, SCP,	
SSH(v2)/SFTP, Telnet, TFTP.	
4. Every switch shall support Multiple software	
images and configurations with fallback	
recovery. A reboot of any switch may be	
initiated with a time-out programmable	
rollback, allowing automatic fallback to a safe	
configuration and/or software image.	
5. Every switch shall support disaster recovery	
and upload/download image files through	
USB device.	
6. Every switch shall support RMon Base, sFlow	
Base, Switch Logging and Syslog.	
7. Every switch shall support Port Mirroring:	
Policy Based Mirroring - Remote Port	
Mirroring.	
8. Every switch shall support Unidirectional	
Link Detection (UDLD) and Digital Diagnostic	
Monitoring (DDM), allowing real-time	
diagnostics of fiber connections for early	
detection of optical signal deterioration.	
9. Every switch shall support 802.1AB Link	
Layer Discovery Protocol (LLDP) with MED	
extensions for automated device discovery.	
10. Every switch shall support Multiple VLAN	
Registration Protocol (MVRP) for IEEE	
802.1Q-compliant virtual LAN (VLAN) pruning	
and dynamic VLAN creation.	
11.Every switch shall support Network Time	
Protocol (NTP) for network-wide time	
synchronization.	
12. Every access switch shall support an auto-	
QoS feature for switch management traffic	
and traffic from IP phones.	
13.Every access switch shall support remote	
auto-configuration download easing and	
5	
automating provisioning of edge switches.	
Routing and Multicast	
1. Every switch shall be wire-rate non-blocking	
for switching (latency < 4 microseconds) and	
routing.	
2. Every switch shall support 4000 VLANS and	
IEEE 802.1q standard.	
3. Every switch shall support 1500 system	
policies	
4. Every switch shall support 16k MAC	
Addresses.	
110010000	

5. Every switch shall support a switch capacity	
of 160 Gb/s on the 24 Port and 200 Gb/S on	
the 48 port and 240 Gb/S on the 10 port	
6. Every switch shall support a switch frame	
rate of 120 Mpps on the 24 Port and 160	
Mpps on the 48 port and 200 Mpps on the 10	
port	
7. Every switch shall support at least static routing and RIP (v1 & v2 for IPv4, next	
generation for IPv6).	
8. Every switch shall support at least 256 IPv4	
and 128 IPv6 routes	
9. Every switch shall support at least 128 IPv4	
and 16 IPv6 router interfaces	
10.Access switches should support OSPF	
11.Every switch shall support IGMPv1/v2/v3	
snooping for optimized multicast traffic.	
12. Every switch shall support Multicast Listener	
Discovery (MLD) v1/v2 snooping.	
13.Every switch shall support at least 1000	
multicast groups	
14. Every switch shall support Multicast VLAN	
(IPMVLAN)	
Resiliency and high availability	
1. Every switch shall support 802.1d STP	
Spanning Tree Protocol.2. Every switch shall support 802.1w Rapid	
Spanning Tree Protocol.	
3. Every switch shall support 802.1s Multiple	
Spanning Tree Protocol.	
4. Every switch shall support Per-VLAN	
spanning tree (PVST+)	
5. Every access switch shall support Dual Home	
Link (DHL) for link protection without	
Spanning Tree protocol.	
6. Every switch shall support Link Aggregation -	
Static and LACP (802.3ad).	
7. Every switch shall support broadcast and	
multicast storm control to avoid degradation	
in overall system performance.	
8. Every switch shall support TU-T	
G.8032/Y.1344 2010: Ethernet Ring	
Protection (ERPv2)	
9. Every switch shall support LLDP (802.1ab)	
10. Every switch shall support Virtual Chassis In-	
Service Software Upgrade (ISSU)	
11.Every switch shall support Virtual Chassis 1+N redundant supervisor manager	
Access Switch Security	

1. Every switch shall support Auto-sensing IEEE	
802.1X multi-client, multi-VLAN MAC-based	
authentication for non-802.1X hosts.	
2. Every access switch shall support an	
embedded NAC framework for comprehensive	
user-policy-based network access control.	
3. Every access switch shall support centralized	
RADIUS for device authentication and	
network access control authorization.	
4. Every access switch shall support Web-based	
authentication (Captive Portal): A	
customizable web portal residing on the	
switch that can be used for authenticating	
supplicants as well as non-supplicants.	
5. Every switch shall support Centralized	
RADIUS and LDAP administrator	
authentication.	
6. Every access switch shall support dynamic	
change of authentication (CoA) and enforcing	
traffic remediation or restriction for non-	
compliant devices.	
7. Every access switch shall support automated	
assignment of QoS and Security based on MAC address (range) or IP address (range),	
preferably using the concept of configurable	
Network Profiles holding QoS and Security	
parameters, and which are dynamically	
assigned.	
8. Every switch shall support ARP Defense	
Optimization.	
9. Every switch shall support ARP Poisoning	
Detect.	
10. Every switch shall support IP DoS Filtering.	
11.Every switch shall support MACSec	
encryption to secure the network edge:	
1G/2.5G user and 10G up-link ports	
12. Every switch shall support user	
authentication with Access Guardian (IEEE	
802.1x/MAC/captive portal) with Host	
Integrity Check (HIC) enforcement	
13. Every switch shall support the deployment of	
comprehensive and secure BYoD services in	
enterprise networks such as guest	
management, device on-boarding, device	
posturing, application management and	
dynamic change of authentication (CoA).	
Access Switch Convergence	
1. Every PoE capable switch shall support IP	
phones and WLAN access points, as well as	
any IEEE 802.3af and IEEE 802.3at- 802.3bt	
compliant end devices.	

2. Every PoE capable switch shall allow	
configuring per-port PoE priority and max	
power for power allocation.	
3. Every PoE capable switch shall support	
dynamic PoE allocation: Delivering only the	
power needed by the powered devices (PD) up	
to the total power budget for most efficient	
power consumption.	
4. Every PoE capable switch shall support PoE	
power negotiation via LLDP MED TLV	
extensions.	
5. Every switch shall support eight hardware-	
based queues per port for flexible QoS	
management.	
6. Every switch shall support Flow-based QoS	
with internal and external (remarking)	
prioritization.	
7. Every switch shall support Flow-based	
bandwidth management, ingress rate limiting;	
egress rate shaping per port.	
8. Every switch shall support Configurable	
scheduling algorithms, including Strict	
Priority Queuing (SPQ), Weighted Round	
Robin (WRR) and Deficit Round Robin (DRR).	
9. Every switch shall support Airgroup Network	
Services for Bonjour speaking devices	
· · ·	
provides consistent experience over wireless	
and wired networks	
10. Every switch shall support deployment with	
automated switch setup and	
11.configuration and end-to-end virtual LAN	
(VLAN) provisioning	
Management	
1. Intuitive CLI in a scriptable BASH	
environment via console, Telnet or Secure	
Shell (SSH) v2 over IPv4/IPv6	
2. Every switch shall support Network	
Automation and Programmability Abstraction	
Layer with Multivendor (NAPALM) support	
3. Every switch shall support Fully	
programmable RESTful web services interface	
with XML and JSON support. API enables	
access to CLI and individual MIB objects	
4. Every switch shall support File upload using	
USB, Trivial File Transfer Protocol (TFTP),	
FTP, SFTP or secure copy (SCP) over	
IPv4/IPv6	
5. Every switch shall support Non-volatile	
memory for start-up configuration	
6. Every switch shall support Multiple microcode	
image support with fallback recovery	

7. Every switch shall support Dynamic Host Configuration Protocol (DHCP) relay for IPv4/IPv6	
8. Every switch shall support IEEE 802.1AB Link Layer Discover Protocol (LLDP) with Media Endpoint Discover (MED) extensions	
9. Every switch shall support NTP	
10. Every TOR switch shall support Access to the	
console via USB Adapter with Bluetooth	
technology to provide wireless management,	
eliminating the use of console cables	
11.Every switch shall support ARP poisoning detection.	
Quality of Service (QoS)	
 Every switch shall support Priority queues: Eight hardware-based queues per port 	
2. Every switch shall support Traffic	
prioritization: Flow-based QoS	
3. Every switch shall support Flow-based traffic	
policing and bandwidth management	
4. Every switch shall support 32-bit IPv4/128-	
bit IPv6 non-contiguous mask classification	
5. Every switch shall support Egress traffic	
shaping	
6. Every switch shall support Lossless Virtual	
Output Queuing (VOQ) with configurable	
scheduling algorithms	
7. Every switch shall support DiffServ	
architecture	
8. Every switch shall support Congestion	
avoidance: Support for end- to-end head-of-	
line (E2EHOL) blocking prevention, IEEE	
802.1Qbb Priority-based Flow Control (PFC)	
and IEEE 802.3x Flow Control (FC)	
Monitoring and Troubleshooting	
1. Evenue arritale aball assessment Land (on the flech)	
1. Every switch shall support Local (on the flash)	
and remote server logging (Syslog): event and	
command logging	
2. Every switch shall support IP tools: ping and	
trace route	ļ
3. Every switch shall support Dying Gasp support via SNMP and syslog messages	
4. Every switch shall support Loopback IP	
address support for management per service	
5. Every switch shall support Management	
virtual routing and forwarding (VRF) support	
6. Every switch shall support Policy- and port-	
based mirroring	

7.	Every switch shall support Remote port mirroring	
8.	Every switch shall support sFlow v5 and Remote Monitoring (RMON)	
9.	Unidirectional Link Detection (UDLD), Digital Diagnostic Monitoring (DDM), and Time Domain Reflectometry (TDR	
•) Wireless LAN	
	lution & Architecture	
1.	The wireless LAN solution shall be based on IEEE 802.11 and shall be WFA certified for Data and Voice.	
2.	The wireless LAN solution shall propose a distributed control function (no centralized controller) with inherent support for redundancy, elimination of traffic bottlenecks and lowered latency.	
3.	The wireless LAN solution shall rely on a distributed and L2 only data plane.	
	The wireless LAN solution shall come in two flavors allowing two deployment types: "small deployment" for a mono-site deployment with Access Points spread over a single broadcast domain (VLAN) and operating in a common RF environment § "large deployment" for a multi-site deployment with Access Points spread over multiple broadcast domains (VLAN) that may operate in different RF environment For both deployment types, the solution shall offer advanced features like Intrusion Detection/Prevention or a Captive Portal to	
	manage guests' connection without additional third-party components management per service	
	The wireless LAN solution shall propose a centralized management function	
	The WLAN solution shall allow to connect two distant sites over a wireless point-to-point link.	
	The WLAN solution shall allow to connect multiple distant sites over wireless.	
	The WLAN solution shall support IPv6 for wireless clients.	
	Access Control, Authentication and Encryption	
	The wireless LAN solution shall support 802.1x based authentication.	

previously (171) shall interface with an external RADIUS server, then it shall be able to interface with multiple and distinct RADIUS servers depending on specific access conditions (SSID name, Access Point IP address, identity of the connecting user) 13. The wireless LAN solution shall support following link layer encryption standards: WPA2_AES, WPA2_TKIP, WPA_AES, WPA_TKIP, WPAAES, TKIP, WPA2_PSK_AES, WPA7_SK_AES, WPA2_PSK_AES, WPA3_SAE_AES. 14. The wireless LAN solution shall support the latest WPA3 concryption standard. 15. The wireless LAN solution shall support three based policy access to a SSID. 16. The wireless LAN solution shall support time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow dust aretention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall allow automatic and/or maximum number of devices per account. RM Manag		
external RADIUS server, then it shall be able to interface with multiple and distinct RADIUS servers depending on specific access conditions (SSID name, Access Point IP address, identity of the connecting user) 13. The wireless LAN solution shall support following link layer encryption standards: WPA2_RES, WPA2_TKIP, WPA_AES, WPA_PSK_AES, WPA2_PSK_TKIP, WPA2_PSK_AES, WPA2_PSK_AES, WPA2_PSK_AES, WPA2_PSK_AES, WPA2_PSK_AES, WPA2_PSK_AES, SEA_ES. 14. The wireless LAN solution shall support the lattest WPA3 encryption standard. 15. The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts. 19. The WLAN solution shall allow guests accounts. 19. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. 17. The Guestion shall allow setting the validity period for the device, per account. 21. The WLAN solution shall allow submatic and/or manual RF management (12.If the built-in RADIUS server as described	
to interface with multiple and distinct RADIUS servers depending on specific access conditions (SSID name, Access Point IP address, identity of the connecting user) identity of the connecting user) 13.The wireless LAN solution shall support following link layer encryption standards: WPA2_AES, WPA_TKIP, WPA_ESK_AES, TKIP, WPA2_PSK_TKIP, WPA2_PSK_AES, TKIP, WPA3_PSK_SAE_AES, WPA3_SAE_AES, WA33_SAE_AES, WA3_SAE_AES, WA3_SAE_AES, WA3_SAE_AES, WPA3_SAE_AES, WPA3_SAE_AES, WPA3_SAE_AES, WA3_SAE_AES,	previously ([17]) shall interface with an	
to interface with multiple and distinct RADIUS servers depending on specific access conditions (SSID name, Access Point IP address, identity of the connecting user) 13.The wireless LAN solution shall support following link layer encryption standards: WPA_RES, WPA_TKIP, WPA_PESK_AES, WPA_PESK_TKIP, WPA_PESK_AES_TKIP, WPA2_PESK_AES, WPA3_SAE_AES_TKIP, WPA3_PESK_SAE_AES, WPA3_SAE_AES_TKIP, WPA3_PESK_SAE_AES, WPA3_SAE_AES_ 14.The wireless LAN solution shall support the latest WPA3 encryption standard. 15.The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16.The wireless LAN solution shall support time- based policy access to a SSID. 17.The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18.The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts information and shall propose a template import file. 20.The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 21.The on-boarding process of employee devices shall be based on employee corporate accounts. 22.The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. EW Management 1. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. EW Management 1. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. EW Management 1. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. EW Management 1. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. EW Management 1. The WLAN solution shall support Shor	external RADIUS server, then it shall be able	
RADIUS servers depending on specific access conditions (SSID name, Access Point IP address, identity of the connecting user) 13. The wireless LAN solution shall support following link layer encryption standards: WPA2_AES, WPA2_TKIP, WPA_AES, WPA_TKIP, DYNAMIC_WEP, WPA_PSK_AES, WPA2_PSK_AES, WPA2_PSK_TKIP, WPA3_PSK_SAE_AES, WPA2_PSK_TKIP, WPA3_PSK_SAE_AES, WPA3_SAE_AES. 14. The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time- based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RE Management 11. The wLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RE Management 10. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RE Management 11. The WLAN solu		
conditions (SSID name, Access Point IP address, identity of the connecting user) 13. The wireless LAN solution shall support following link layer encryption standards: WPA2_AES, WPA2_TKIP, WPA_AES, WPA_PSK_AES, WPA_PSK_TKIP, WPA2_PSK_AES, WPA_PSK_AES, WPA2_PSK_AES, WPA2_PSK_SAE_AES, WPA2_PSK_AES, WPA2_PSK_AES, WPA3_SAE_AES. 14. The wireless LAN solution shall support the latest WPA3 encryption standard. 15. The wireless LAN solution shall support time-based policy access to a SSID. 16. The wireless LAN solution shall aluport time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: Username & Password Access Code Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. 23. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. 24. Massolution shall allow setting the validity period for the device, and the maximum number of devices per acco	-	
address, identity of the connecting user) 13. The wireless LAN solution shall support following link layer encryption standards: WPA2_AES, WPA2_TKIP, WPA_AES, WPA_TKIP, DYNAMIC_WEP, WPA_PSK_AES, WPA_PSK_TKIP, WPA_PSK_AES_TKIP, WPA3_PSK_SAE_AES, WPA3_SAE_AES. 14. The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 15. The wireless LAN solution shall support following gathemic access to a SSID. 16. The wireless LAN solution shall support following authentication methods: • Username & Password • Username & Password • Username & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 11. The NLAN solution shall allow automatic and/or manual RF management (channel and power). 21. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 21. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall support Short Guard Interval.		
13.The wireless LAN solution shall support following link layer encryption standards: WPA2_AES, WPA2_TKIP, WPA_PSK_AES, WPA_TKIP, DYNAMIC_WEP, WPA_PSK_AES, WPA_PSK_TKIP, WPA2_PSK_AES, WPA_PSK_TKIP, WPA2_PSK_AES, WPA2_PSK_AES, 14.The wireless LAN solution shall support the latest WPA3 encryption standard. 15.The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16.The wireless LAN solution shall support time- based policy access to a SSID. 17.The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Username & Password 18.The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19.The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20.The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21.The on-boarding process of employee devices shall be based on employee corporate accounts. 22.The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 3. The WLAN solution shall be		
following link layer encryption standards: WPA2AES, WPA2TKIP, WPA, TKIP, WPA, PSK, AES, WPA, PSK, TKIP, WPA2PSK, AES, WPA3 PSK, SAE, AES, WPA3 SAE, AES, AES, AES, AES, AES, AES, AES,

WPA2_PSK_AES, WPA3_PSK_SAE_AES, 14. The wireless LAN solution shall support the latest WPA3 encryption standard. 15. The wireless LAN solution shall support following 802. 1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • • Username & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 11. The work solution shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 10. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 11. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Bort Guard Interval. 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/5GHz) considering, at		
WPA3_PSK_SAE_AES, WPA3_SAE_AES. 14. The wireless LAN solution shall support the latest WPA3 encryption standard. 15. The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/5GHz) considering, at	WPA_PSK_TKIP, WPA_PSK_AES_TKIP,	
14. The wireless LAN solution shall support the latest WPA3 encryption standard. 15. The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow mon-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. RF Management 1. The WLAN solution shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/5GHz) considering, at	WPA2_PSK_AES, WPA2_PSK_TKIP,	
latest WPA3 encryption standard. 15. The wireless LAN solution shall support following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time- based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/SGHz) considering, at	WPA3_PSK_SAE_AES, WPA3_SAE_AES.	
15. The wireless LAN solution shall support following 802. 1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time- based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 3. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/SGHz) considering, at	14. The wireless LAN solution shall support the	
following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time- based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/SGHz) considering, at	latest WPA3 encryption standard.	
following 802.1x supplicants: Windows 7, 10, MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time- based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/SGHz) considering, at	15.The wireless LAN solution shall support	
MAC OS, IOS, Android, Chromebook 16. The wireless LAN solution shall support time-based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow sutting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 3. The WLAN solution shall be smart enough to guide a new client to the optimal band/channel (2.4GHz/SGHz) considering, at		
16. The wireless LAN solution shall support time- based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Short Guard Interval. 3. The WLAN solution shall be basent enough to guide a new client to the optimal band/channel (2.4GHz/SGHz) considering, at		
based policy access to a SSID. 17. The Guest management solution shall allow, at least, following authentication methods: • Username & Password • Access Code • Simple Term & Condition acceptance 18. The Guest management solution shall allow non-IT staff (e.g., a receptionist) to create temporary guest accounts. 19. The WLAN solution shall allow guests accounts bulk provisioning by importing a file containing guest accounts information and shall propose a template import file. 20. The WLAN solution shall allow data retention on user sessions when providing Guest Wi-Fi. 21. The on-boarding process of employee devices shall be based on employee corporate accounts. 22. The BYOD application shall allow setting the validity period for the device, and the maximum number of devices per account. RF Management 1. The WLAN solution shall allow automatic and/or manual RF management (channel and power). 2. The WLAN solution shall support Short Guard Interval. 3. band/channel (2.4GHz/5GHz) considering, at	-	
	guide a new client to the optimal	
a given time, both the number of associated		
	a given time, both the number of associated	

clients on each band, and the medium	
utilization.	
4. If no band/channel (2.4GHz/5GHz) is	
overloaded (high medium utilization) or	
crowded (high client count), an AP shall by	
default guide a new client to the 5GHz band.	
5. Even if the 5GHz band is not overloaded but	
is crowded (high client count), an AP shall	
guide a new client to the 2.4GHz band.	
6. If a band/channel (2.4GHz/5GHz) is	
overloaded (high medium utilization) and even	
if it is not crowded, an AP shall guide a new	
client to the less loaded band/channel.	
7. If all bands/channels (2.4GHz/5GHz) are	
overloaded (high medium utilization) and no	
band/channel is crowded, an AP shall guide a	
new client to the 5GHz band.	
8. If all bands/channels (2.4GHz/5GHz) are	
overloaded (high medium utilization) and the	
5GHz is crowded, an AP shall guide a new	
client to the 2.4GHz band.	
9. When a new client discovers multiple APs to	
associate to, the new client shall be guided to	
the AP that has the fewest associated clients,	
thus allowing smart/dynamic load balancing.	
10. The WLAN solution shall force clients to the	
5GHz only when there are dual band capable.	
11. The WLAN solution shall deny connection to	
an AP when the signal of the client becomes	
too weak and disconnect a client to force it to	
roam when the signal becomes too weak.	
12. The WLAN solution shall support the IEEE	
802.11v and 802.11k standards to facilitate	
network guided roaming.	
13. The WLAN solution shall support data rate	
control to encourage clients to roam at higher	
rates.	
14. The WLAN solution shall propose APs that	
can scan the air in order to provide	
interfering/rogue APs and wireless attacks	
detection and shall not rely on dedicated	
scanning equipment.	
15. The scanning function of the APs shall not	
impact active voice or video calls (SIP and	
H.323).	
16.At least for the 5GHz band, the WLAN	
solution shall allow to define the list of	
channels which can participate in dynamic	
configuration.	
17. The WLAN solution shall allow to define a	
range of transmit power per band (min & max)	

even if power settings are configured for	
automatic and dynamic assignments.	
18. The WLAN solution shall propose Access	
Points which can all be configured and	
deployed in a dedicated scanning mode.	
19.The WLAN solution shall allow long interval	
background scanning.	
Intrusion Detection and Prevention	
1. The WLAN solution have wIDS/wIPS	
capabilities with no additional and dedicated	
equipment nor additional license.	
2. The WLAN solution shall be able to identify	
Interfering APs.	
3. The WLAN solution shall be able to identify	
and contain Rogue APs.	
4. The WLAN solution shall allow the definition	
of flexible policies to classify an AP as a Rogue	
AP.	
Quality of Service (QoS)	
1. ACL based (source/destination IP address and	
TCP/UDP ports) permit/deny decision	
2. QoS priority marking and queuing	
3. The wireless LAN solution shall comply with	
the 802.11e WMM standard and shall allow	
for custom QoS tag (802.1p/DSCP) to WMM	
queue mapping.	
4. The wireless LAN solution shall propose	
broadcast traffic optimization mechanisms	
(including Broadcast filtering and	
Broadcast/Multicast Key rotation).	
5. Leveraging its IGMP snooping capabilities, the	
wireless LAN solution shall be able to optimize	
multicast traffic by converting multicast	
traffic to unicast traffic.	
6. The wireless LAN solution shall propose the	
WMM Automatic Power Save delivery (APSD)	
feature to allow clients conserve battery life.	
7. The wireless LAN solution shall by default	
identify Voice and Video (SIP and H323) calls	
and provide appropriate treatment.	
Management	
1. The wireless LAN solution shall propose a	
centralized management function based on an embedded and secure WEB GUI.	
8	
requires the deployment of a dedicated	
application, this one shall be in the form of a	
Virtual Appliance that can be installed on top	
of any of following hypervisors: VMware ESXi,	
Microsoft HyperV and Oracle VirtualBox.	

3. The WLAN solution shall be able to	
automatically discover new APs added to the	
network.	
4. Centralized management function shall allow	
to display the physical topology of the	
network, including wireless links between	
APs.	
5. The centralized management function shall	
allow per equipment configuration and	
software backup and restore, and bulk	
backup and restore	
6. The centralized management function shall	
allow access to all wIPS/wIDS features.	
Indoor Access Point Type A	
1. The WLAN solution shall propose a 802.11ac	
wave2 MU-MIMO indoor tri-radio AP Access	
Point (2.4, 5G low, 5G high):	
2. The access Point shall have integrated omni-	
directional antennas or may be equipped with	
external antennas.	
3. The access Point shall offer native BLE radio	
support.	
4. The access Point shall support up to 24 SSIDs	
(8 per radio).	
5. The access Point shall offer up to 1733Mbps	
throughput on the 5Ghz band (low and high	
bands) and up to 800Mbps throughput on the	
2.4GHz band.	
6. The access Point shall support up to 768	
clients.	
7. The access Point shall have one 1Gb Ethernet	
port and one 2.5Gb Ethernet (IEEE 802.3bz	
Multi-rate Gigabit Ethernet) which may be	
aggregated as a single logical link (LACP).	
8. The access Point shall propose Deep Packet	
Inspection (DPI) capabilities providing real-	
time classification of flows at the application	
level.	
9. The access Point shall support 802.3af/at	
PoE with 27.6W maximum consumption.	
10. The MTBF for the access Point shall be at	
least 525600h (60 years).	
11. The access Point shall propose a Factory reset	
button.	
12. The access Point shall propose a Factory reset	
button.	
Indoor Access Point Type B	
1. Proposed access points must support 802.11ac.	
002.11al.	

 Must support concurrent data rate of 1.2 Gb/s (867 Mb/s in 5 GHz and 400 Mb/s in 2.4 GH2, 80 MHz channels (VHT80), multi- user MIMO (MU-MIO) and two spatial streams (2SS) per radio. Must provide simultaneous multicast data transmission to multiple devices, maximizing data throughput and improving network efficiency. Must support enhanced WLAN technology with RF Radio Dynamic Adjustment, a distributed control Wi-Fi architecture, secure network admission control with unified access, must have built in application intelligence and analytics, making it ideal for enterprises of all sizes demanding a simple, secure and scalable wireless solution. Must have integrated support for BLES.0/Zigbee/Thread, making it ideal for broad scope of loT end-points and applications. Access point must support fine-tuned, quality of service (QoS) parameters to differentiate and provide appropriate QoS for each applications such as voice, video and desktop sharing. Access Point must be 802.11e (WMM) compliant, also providing marking for RTP/SRTP sessions which include Skype for business, Google Hangout etc. Must support RF management for Radio Dynamic Adjustment (RDA) technology automatically assigns channels and power settings, provides DFS/FPC, and ensures that access points aty clear of all radio frequency interference (RPI) sources to deliver reliable, high-performance wireless LANs. APs can be configured to provide part-time or dedicated air monitoring for spectrum analysis and wireless intrusion protection. The AP must have built-in BLE that can act in either BLE beacon mode and BLE gateway mode or both modes ismultaneously. To enable a single infrastructure to be used for asset tracking as well as for other Location- Based Services like smart-phone based Way- Finding, GecoNotification etc. Employing a single infrastructure simplifies the solution deployment and reduces the cost of a total location services solution AP Radio sp

MIMO 5 GHz: Two spatial stream single user	
(SU) /multi user (MU) MIMO for up to 867	
Mb/s wireless data rate	
• GHz: Two spatial stream single user (SU)	
MIMO for up to 400 Mb/s wireless data	
rate to individual 2x2 VHT40 client devices	
(300 Mb/s for HT40 802.11n client	
devices)	
Supported frequency bands (country	
specific restrictions apply): ¬ 2.400 to	
2.4835 GHz ¬ 5.150 to 5.250 GHz ¬ 5.250	
to 5.350 GHz ¬ 5.470 to 5.725 GHz ¬	
5.725 to 5.850 GHz	
10.BLE reception Support required	
 -103.3 dBm sensitivity at 125 kbit/s 	
GFSK, 2.4 GHz	
• -94.8 dBm sensitivity at 1 Mbit/s	
GFSK, 2.4 GHz	
• -91.5 dBm sensitivity at 2 Mbit/s	
GFSK, 2.4 GHz	
 -102.7 dBm sensitivity at 250 kbps 	
DSSS-OQPSK, 2.4 GHz	
11. Access Point Capacity	
1 0	
• Must Support up to 8 SSID per radio.	
Total 16 SSIDs (HW ready to extend to	
32 SSID)	
• Must Support for up to 512 associated	
client devices per AP	
12. Regulatory & certification Standard Support	
CB Scheme Safety, cTUVus	
• Wi-Fi Alliance (WFA) certified	
802.11a/b/g/n/ac	
FCC • CE marked	
• RoHS, REACH, WEEE	
• EN 60601-1-1 & EN 60601-1-2	
• EMI and susceptibility (Class B)	
13.IEEE standard Support:	
• IEEE 802.11a/b/g/n/ac Wave 2	
• IEEE 802.11e WMM	
 IEEE 802.11h, 802.11i, 802.11e QoS 	
-	
• IEEE 802.1Q (VLAN tagging)	
802.11k Radio Resource Management	
802.11v BSS Transition Management	
• 802.11r Fast Roaming	
14. Security Standard Support	
• 802.11i, Wi-Fi Protected Access 2	
(WPA2), WPA, AES 128-256 bits	
• 802.1X	
• WEP, Temporal Key Integrity Protocol	
(TKIP)	
• Firewall: ACL, wIPS/wIDS and DPI	
application policy enforcement with	

	1
NMS	
 Portal page authentication 	
Integrated Trusted Platform Module	
(TPM) for secure storage of credentials and	
keys	
5	
15. Must support Plug and Play Secure Web	
managed (HTTPS) cluster deployment.	
The access point cluster must be an	
autonomous system that consists of a group	
of APs and a virtual controller, which is a	
selected access point, for cluster	
management. One AP cluster must support	
up to 64 APs.	
16.The AP must support secure zero-touch	
provisioning with IP Telephony mechanism by	
which all access points in a cluster will obtain	
bootstrap data securely from an on-premise	
Communication system.	
17.Bidder must highlight all above-mentioned	
features on datasheet.	
Network Management	
1. Proposed Network Management System (NMS)	
must provide cohesive management and	
network-wide visibility, to increase IT	
efficiency and business agility. It also	
provides advanced network analytics for a full	
visibility into wired-wireless devices, IoT	
endpoints and applications, as well as	
predictive analysis for forward planning	
2. Must Provide a network-wide management	
system for the Network portfolio, NMS must	
provide a comprehensive set of components	
and tools for campus mobile infrastructure	
configuration, monitoring, security, device	
configuration, alert management, to	
accelerate, downtime resolution, and overall	
management.	
3. Network management should support	
Network device Software and firmware update	
for version baselining	
4. Network management should support	
Network analytics monitor the network	
bandwidth and key traffic patterns through	
advanced collection and reporting capabilities	
5. Support for Unified access provisioning	
provides a single set of policy enforcement	
instructions for both Wired and wireless	
users, with authentication strategies (LDAP,	
Radius, Active Directory)	
- BYOD (Bring Your Own Devices) integration	

6. Agnostic support, Interfaces with VMware	
vCenter [®] , Microsoft Hyper-V [®] and Citrix [™]	
Hypervisor for discovery and inventory	
7. Solution must create seamless, fully	
integrated management for virtual machine	
(VM) movements and ensures that network	
policies move with the Virtual Machine.	
8. Northbound interface RESTful APIs for	
application interoperability and ecosystem	
support	
9. Monitors and analyzes alerts, notifications	
and network performance from third-party	
devices in real time	
10.Rapid troubleshooting and isolation of	
network issues through one-click mitigation	
11. Must Provide insight in the network health	
with advanced graphical analytics on most	
problematic devices based on device state	
(CPU, memory, temperature)	
12.Integrated captive portal with credentials	
management for email, sms, social Login	
Facebook, Google.	

SECTION VI - SCHEDULE OF REQUIREMENTS

#	Description	Quant ity	Delivery schedule (shipment) (To be delivered and installed within 4-6 weeks after the date of contract signing)			
Cor	e Switch & Accessories					
1	Core Switch: 1RU 10GE L3 fixed chassis with 20 SFP+ ports, one optional module slot. Back to Front cooling. Includes AC power supply and cord. Ships with user manuals access card, rack mounts, and USB to RJ-45 adaptor.	1				
2	Dual-speed SFP+ optical transceiver. Supports multimode fiber over 850nm wavelength nominal) with an LC connector. Supports 1000BaseSX and 10GBASE-SR	10				
3	SFP-GIG-T -1000Base-T Gb Ethernet Transceiver (SFP Multiple Source Agreement, MSA). SFP to work at 1000 Mb/s speed and full-duplex mode.	4				
Acc	ess Switch & Accessories					
4	PoE+24 Port GigE fixed chassis 24 RJ-45 PoE 10/100/1G BaseT, 2 fixed SFP (1G), 4 fixed SFP+ (1G/10G) uplink/stacking ports. 1RU size, 600W AC power supply Includes United Kingdom power cord, and 19"" rack mount hardware."	4				
5	PoE+ 48 Port GigE fixed chassis 48 RJ-45 PoE 10/100/1G BaseT, 2 fixed SFP (1G), 4 fixed SFP+ (1G/10G) uplink/stacking ports. 1RU size, 920W AC power supply. Includes United Kingdom power cord, guides, and "19" rack mount hardware."	2				
Wire	Wireless LAN (WiFi) Accessories					
6	Mounting kit, Type A wall mount and ceiling mount with screws.	15				

7	Type A: Indoor Access Point Dual radio 2x22 4x44 802.11a/b/g/n/ac MU-MIMO AP, integrated antenna, 1x GbE, 1x USB opt BLE), 1x 48V DC power interface, 1x Console.	13	
8	Type B: Enterprise access point 802.11ac MU- MIMO AP, Dual-Radio, 11n 2x2:2 + 11ac 2x2:2, 1x GbE, BLE radio, 1x Console, and integrated antennas.	2	
9	Controller	1	
10	Network Designing and Documentation, Installation & Commissioning		
11	Network Management	1	
12	Training and Documentation	1	
13	1 Year SLA support & Maintenance	1	
14	Warranty: All equipment must come with 1 Year warranty from the Commissioning date	1	

SECTION VII - STANDARD FORMS

Notes on the sample Forms

- 1. **Form of Tender** The form of tender must be completed by the tenderer and submitted with the tender documents. It must also be duly signed by duly authorized representatives of the tenderer.
- 2. **Price Schedule form** The form of tender must be completed by the tenderer and submitted with the tender documents. It must also be duly signed by duly authorized representative(s) of the tenderer.
- 3. **Contract Form** The Contract Form shall not be completed by the tenderer at the time of submitting the tender. The Contract Form shall be completed after contract award and should incorporate the accepted contract price.
- 4. **Confidential Business Questionnaire Form** This form must be completed by the tenderer and submitted with the tender documents.
- 5. **Self- Declaration Form** This form must be completed by the tenderer and submitted with the tender documents.
- 6. **Tender Security Form** When required by the tender documents the tender shall provide the tender security either in the form included herein or in another format acceptable to the procuring entity.
- 7. **Performance Security Form** The performance security form should not be completed by the tenderers at the time of tender preparation. Only the successful tenderer will be required to provide performance security in the form provided herein or in any other form acceptable to the procuring entity.
- 8. **Bank Guarantee for Advance Payment Form** When Advance payment is requested for by the successful bidder and agreed by the procuring entity, this form must be completed fully and duly signed by the authorized officials of the bank.
- 9. **Team Composition and Task Assignments** This form must be completed by the tenderer and submitted with the tender documents and signed as required.
- 10. **CV's for Managerial and key technical staff form** This form must be completed by the tenderer and submitted with the tender documents and signed as required.
- 11. **Clients Reference form** This form must be completed by the tenderer and submitted with the tender documents and signed as required.
- 12. **Manufacturers Authorization Form** When required by the tender documents this form must be completed and submitted with the tender documents. This form will be completed by the manufacturer of the goods where the tenderer is an agent.
